## Enhancing Your Home Comfort Since 1904

Thanks to Bryant, American homeowners have enjoyed enhanced, reliable home comfort since 1904. Through the commitment and dedication of our product development and manufacturing teams, we have consistently met every new challenge head-on and delivered the products to meet or exceed expectations. As consumers demand more control over both comfort and energy savings, Bryant offers a flexible solution that fits a variety of needs - Zone Perfect *Plus*™ Zoning Systems.

Zone Perfect *Plus*™ offers 2-zone, 4-zone and up to 8-zone systems to provide a solution for virtually any home. It allows you to deliver comfort to the areas where you need it most, while conserving cost by reducing the amount of energy used heating or cooling unoccupied spaces. It offers the ability to add exceptional humidity control for even greater comfort and energy efficiency. Best of all, it's installed and backed by your trusted local Bryant dealer.

## Comfort Challenges

If you are like most people, some areas of your home are more comfortable than others. A single thermostat can't possibly keep track of temperatures throughout the entire home. And, because hot air rises and cool air falls it's even worse when you have a second story. High ceilings, two-story entrances, large windows, skylights and fireplaces all affect your indoor comfort. In addition, external conditions that change throughout the day, including heat from the sun or shade from a large tree can greatly influence your comfort inside.

The best way to overcome these obstacles and maintain room-to-room comfort is to have separate control over the temperature in different areas of your home. Bryant's Zone Perfect *Plus*™ divides your home into as many as eight different areas so your system can deliver comfort to the spaces you use the most while maximizing energy savings in less frequently used areas.

# Deliver Improved Comfort and Efficiency

## Zone Perfect *Plus*™ Eight-Zone

The Bryant Zone Perfect *Plus*™ Eight-Zone system provides maximum flexibility and comfort with the ability to control as many as eight different areas within your home. A separate sensor in each area monitors conditions and communicates with the system's main control. You can create and customize a comfort schedule that best fits your family's lifestyle to enjoy the best combination of optimum comfort as well as money-saving economy.

## Warranty

To the original owner, the Bryant Zone Perfect *Plus*™ systems are covered by a 10-year parts limited warranty.\* Ask your Bryant dealer about optional extended warranties, which may include labor.

\* Warranty period is 5 years if not registered within 90 days. Jurisdictions where warranty benefits cannot be conditioned on registration will automatically receive a 10-year parts limited warranty. See warranty certificate at [bryant.com](http://bryant.com) for complete details.

## Four-Zone and Two-Zone Systems

For simpler or more modestly-sized homes and budgets, Bryant also offers Four-Zone and Two-Zone systems. Both of these systems provide the same benefit - dividing your home into areas that need more comfort and areas that can be targeted for reduced energy use.

They provide many of the same functions and features of our Eight-Zone system as well, however they offer fewer zones to work with. Your Bryant dealer can help you decide which Zone Perfect *Plus*™ system best fits your needs.

## Performance

As an ENERGY STAR® Partner, Bryant Heating & Cooling Systems has determined that this product meets the ENERGY STAR® guidelines for energy efficiency. Ask your contractor for details or visit [www.energystar.gov](http://www.energystar.gov).

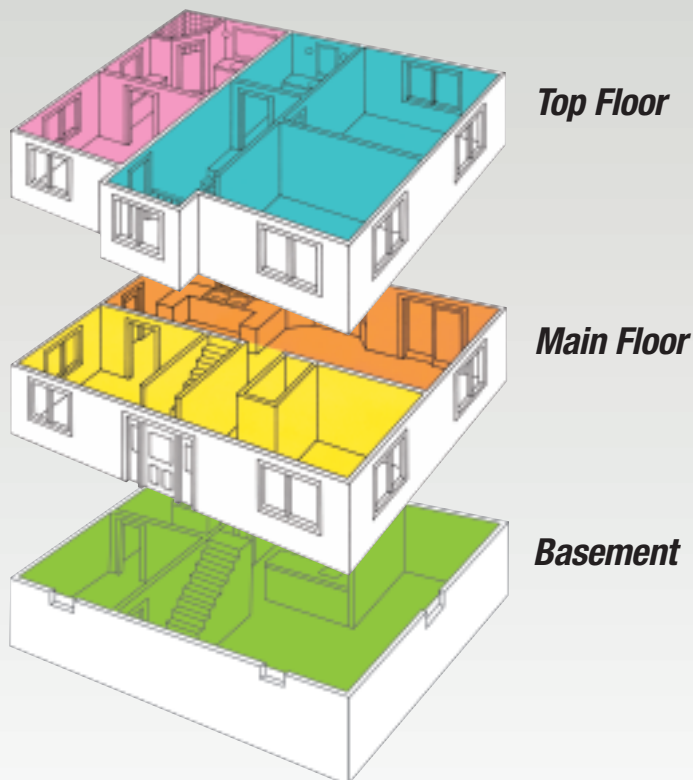

## Zoning Solutions

### Multiple Levels

- The first and most obvious solution to comfort challenges on multiple levels is to make each floor a zone. Then, split each floor into separate zones according to use or special comfort needs.
- On a typical main floor, the kitchen and dining room often make up one logical zone. Living areas on the same floor could be included in a separate zone or zones. Other areas such as a rarely used study, a master bedroom or a large entry may need to be zoned separately as well.
- On the upper level, you might consider separating children's bedrooms from a master bedroom. Or, an unoccupied guest bedroom could be zoned by itself.
- A basement media room or bonus family room would be another possible zone.

### One Level

- Single-story homes provide similar challenges due to having several rooms spread out across one level. No matter how well designed, these homes still have just one thermostat controlling the temperature throughout. These homes are great candidates for zoning.

## Home Comfort Technology

### SMART RECOVERY

The Smart Recovery function ensures that each zoned area reaches your selected temperature setting at the proper time by starting the system in advance of the scheduled temperature change.

### DEHUMIDIFICATION

For additional comfort during hot, sticky summers, this system can be set to dehumidify.

### WINTER COMFORT

When installed with a Bryant humidifier, Zone Perfect Plus can provide relief from dry, heated air.

### PERFECT HUMIDITY™

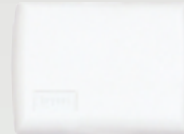

When installed with a variable speed furnace or fan coil and a matched humidifier and air conditioner or heat pump, you can enjoy the enhanced comfort of our Perfect Humidity™ system.
